# Momentum Grid® Report for Discrete ERP | Fall 2026

## Trending Discrete ERP Software

Momentum scores for Discrete ERP are shown below. The Momentum Grid® highlights each product's Momentum score on the vertical axis and the product's Satisfaction score on the horizontal axis. These scores are based on G2's Satisfaction and Momentum algorithms. Products with a top 25% Momentum Grid® score are shown within the shaded area below.

* The Momentum Grid score is a combination of the product's Momentum score, a measure of employee growth, review growth, social growth, and web growth, and Satisfaction score, a measure of customer satisfaction based on user reviews.

*(Trending Discrete ERP Software continues on next page)*

# Trending Discrete ERP Software *(continued)*

## Discrete ERP Momentum Grid® Description

A product's Momentum score is calculated by a proprietary algorithm that factors in social, web, employee, and review data that G2 has deemed influential in a company's momentum. Software buyers can compare products in the Discrete ERP category according to their Momentum and Satisfaction scores to streamline the buying process and quickly identify trending products. For sellers, media, investors, and analysts, the Momentum Grid® provides benchmarks for product comparison and market trend analysis. Badges are awarded to products with the top Momentum Grid® scores.

Products included in the Momentum Grid® for Discrete ERP have received a minimum of 10 reviews. There must also be at least a year of G2 data for the product to be included. These ratings may change as the products are further developed, the sellers grow, and additional opinions are shared by users; a new Momentum Grid® report will be issued for this category as significant data is collected.

## Discrete ERP Software Definition

Discrete ERP software manages most operational and back-office activities of manufacturing companies that produce distinct or individually separated products. Discrete ERP systems are used to plan, manage, and track production activities as well as other related processes such as inventory management, sales, purchasing, or accounting. By using discrete ERP software, manufacturers can identify what needs to be produced based on demand, what raw materials are required for production, and how to create and implement production plans. In addition, discrete ERP tools help manufacturers monitor the quality of the products and deliver them to customers.

Due to its broad scope, discrete ERP software can be used by all departments of a manufacturing company, but it is critical for the production team. For optimal results, discrete ERP solutions should be used by accountants to manage financial transactions, by purchasing managers for fulfillment, or by warehouse managers to manage the inventory of raw materials and finished goods.

Discrete ERP software can be delivered as a standalone solution or as a package combining multiple solutions. Many vendors also provide a core package and additional modules that can be bought separately. This type of software needs to integrate with other enterprise software such as CRM all-in-one software, supply chain suites, PLM software, and HR management suites.

To qualify for inclusion in the Discrete ERP category, a product must:

- Provide robust accounting features or tight integration with accounting software
- Include features to create and manage multiple types of bills of materials
- Create and consolidate purchase orders for raw materials and finished products
- Capture sales orders from customers and match them with product availability
- Manage inventory or raw materials and finished products in multiple locations
- Identify and allocate the equipment and human resources needed for production
- Create and implement production plans depending on demand and capacity
- Monitor quality standards for products during production and warehouse storage
- Provide features to ship products to customers or distributors and track returns
- Track production and administrative costs per department or activity
- Include financial reporting and dashboards as well as financial statements

# Momentum Grid® Methodology

G2 rates products based on reviews gathered from our user community, as well as data aggregated from online sources and social networks. The Momentum Grid® for Discrete ERP is based on scores calculated using the G2 Satisfaction algorithm v3.0 and the G2 Momentum algorithm v1.0 from reviews collected through July 28, 2026.

## Satisfaction Methodology

The satisfaction rating is affected by the following:

- Customer satisfaction with end user-focused product attributes based on user reviews
- Popularity and statistical significance based on the number of reviews received by G2
- Quality of reviews received (reviews that are more thoroughly completed will be weighted more heavily)
- Age of reviews (more-recent reviews provide relevant and up-to-date information that is reflective of the current state of a product)
- Customers' satisfaction with administration-specific product attributes based on user reviews
- Overall customer satisfaction and Net Promoter Score® (NPS) based on ratings by G2 users

*The customer Satisfaction score is normalized for each Grid®, meaning the scores are relative.

## Momentum Methodology

Each variable is normalized by category and aggregated to create a Momentum score. The inputs impacting G2's Momentum score are as follows:

- Employee growth, review growth, social growth, and web growth
- Year-over-year change

## Categorization Methodology

Making G2 research relevant and easy for people to use as they evaluate and select business software products is one of our most important goals. In support of that goal, organizing products and software companies in a well-defined structure that makes capturing, evaluating, and displaying reviews and other research in an orderly manner is a critical part of the research process.

To manage the process of categorizing the software products and the related reviews in the G2 community, G2 follows a publicly available categorization methodology. All products appearing on the Momentum Grid® for Discrete ERP have passed through G2's categorization methodology and meet G2's category standards.

Many terms that appear regularly across G2 and are used to aid in product categorization warrant a definition to facilitate buyer understanding. These terms may be included within reviews from the G2 community or in executive summaries for products included on the Grid®.

A list of standard definitions is available to G2 users to eliminate confusion and ease the buying process.

*(Momentum Grid® Methodology continues on next page)*

# Momentum Grid® Methodology *(continued)*

## Rating Changes and Dynamics

The ratings in this report are based on a snapshot of the user reviews and social data collected by G2 up through July 28, 2026. The ratings may change as the products are further developed, the sellers grow, and additional opinions are shared by users. G2 updates the ratings on its website in real time as additional data is received, and this report will be updated as significant data is received.

## Trust

Keeping our ratings unbiased is our top priority. We require the use of a LinkedIn account to validate a G2 user's identity and employer. Additionally, we verify all reviews manually. We do not allow users to rate their employers' products or those of their employers' competitors. Though we share reviews from business partners (they often contain valuable content), we filter out business partner ratings in our aggregate ratings to avoid bias.

Our G2 staff does not add any subjective input to the ratings, which are determined algorithmically based on data aggregated from publicly available online sources and social networks. Sellers cannot influence their ratings by spending time or money with us. Only the opinion of real users and data from public sources factor into the ratings.

G2 may occasionally offer incentives for honest reviews to help us gather a full and accurate data set. These incentives are offered as thank-yous for approved reviews. Incentives are never conditioned upon the substance of the review, positive or negative. Each such incentivized review is disclosed with an "Incentivized Review" banner.
