Distribution ERP Implementation Index *(continued)*

Distribution ERP Market Definition

Distribution ERP software manages logistics operations as well as front- and back-office activities of wholesale and distribution companies. This type of software is used to determine product demand and ensure that products sold are delivered on time. Distribution ERP is used mostly by departments in charge of inventory, warehousing, and logistics. Since distributors sometimes combine products before selling them, most distribution ERP software offer features for assembly and kitting. Most distribution ERP solutions also provide modules for accounting, sales, and purchasing, and sometimes human resources.

Since not all distribution ERP products include all the modules mentioned above, they usually integrate with accounting software, CRM all-in-one software, or HR management suites. For advanced supply chain management and e-commerce needs, distribution ERP systems also integrate with supply chain suites and e-commerce platforms.

To qualify for inclusion in the Distribution ERP category, a product must:

- Provide inventory management and control functionality
- Generate inventory count documents for cycle counts
- Include features to manage warehouses across multiple locations
- Track sales orders and match them to inventory availability
- Create and manage purchase orders to fulfill demand
- Manage shipping and receiving operations in various locations
- Assist users with picking and packing products for shipping
- Maintain financial transactions for all activities such as sales or purchases
- Manage product cost, pricing, discounts, and profit margins
- Plan and implement transportation and delivery schedules
- Analyze the financial and operational performance of the company

Implementation Index Description

A product's Implementation score is calculated by a proprietary algorithm that factors in real-user satisfaction ratings for a number of implementation-related review questions. Software buyers can compare products in the Distribution ERP category according to their Implementation scores to streamline the buying process and quickly identify the most easily implemented products based on the experiences of their peers. For sellers, media, investors, and analysts, the Index provides benchmarks for product comparison and market trend analysis.

Badges are awarded to products for: Most Implementable (highest implementation score), Highest User Adoption (highest overall user adoption score), Fastest Implementation (shortest go-live time), and Easiest Setup (highest ease of setup score).

Products included in the Implementation Index for Distribution ERP | Fall 2026 have received both a minimum of 10 reviews and 5 responses from real users for each of the implementation-related questions featured in our review form by July 28, 2026. These ratings may change as the products are further developed, the sellers grow, and as additional opinions are shared by users, and a new Implementation Index report will be issued for this category as significant data is collected.

Implementation Index Methodology

Implementation Index Inclusion Criteria

Products included in the Implementation Index for Distribution ERP | Fall 2026 have received a minimum of 10 reviews and 5 responses for each of the implementation-related questions featured in our survey by July 28, 2026. Inviting other users, such as colleagues and peers, to join G2 and share authentic product reviews will accelerate this process and encourage the inclusion of additional products.

Implementation Scoring Methodology

G2 rates products and sellers based on reviews gathered from our user community, as well as data aggregated from online sources and social networks. We apply a unique, patent-pending algorithm to this data to calculate the product's Implementation score. The Implementation Index for Distribution ERP | Fall 2026 report is based off of scores calculated using the G2 implementation algorithm v1.0 from data collected through July 28, 2026. The Implementation score is affected by the following (in order of importance):

- Customer satisfaction with the set-up process for each product based on reviews by G2 users
- Amount of time (in months) required for each product to go live based on reviews by G2 users
- User adoption percentage based on reviews and by G2 users
- Implementation method used by customers according to answers by G2 users
- The number of reviews received on G2; buyers trust a product with more reviews, and a greater number of reviews indicates a more representative and accurate reflection of the customer experience.

Categorization Methodology

Please visit G2's categorization methodology page to learn more about how products are categorized. For more in-depth information about how we refer to different types of software, please view our list of standard definitions.

Trust

Keeping our ratings unbiased is our top priority. We require the use of a LinkedIn account or verified business email address to validate a G2 user's identity and employer. We also validate users by partnering with sellers and organizations to securely authenticate users through select platforms. We do not allow users to review their current or former employers' products, or those of their employers' competitors. Additionally, all reviews are manually checked by our team after our algorithm filters out reviews that don't meet our submission requirements. All reviews must pass our moderation process before they are published.

G2 may occasionally offer incentives for honest reviews to help us gather a full and accurate data set. These incentives are offered as thank-yous for approved reviews. Incentives are never conditioned upon the substance of the review, positive or negative. Each such incentivized review is disclosed with an "Incentivized Review" banner.
